I-64 High Rise Bridge Waterproof and Repair Deck

Cost: $3.7 Million

About the Project: Crews will patch the existing concrete deck and overlay the existing bridge deck with an epoxy overlay on the I-64 west lanes of the High Rise Bridge. The epoxy-based material prevents excessive water from seeping into the roadway, which through expansion and contraction during hot and cold temperatures can cause potholes and pooling. Motorists can expect nightly, alternating lane closures beginning in April 2017. The I-64 east lanes were completed ahead of schedule, in April 2012. Additional repairs to the steel superstructure are part of this project.
