Re: Design-Build I-95 Safety Improvements at Route 3
   State Project No.: 0095-111-278 | Federal Project No.: OC-095-2(535)
   Contract ID Number: C00107715DB91 | Section 4.1 Letter of Submittal

Dear Mr. Kindy,

Branch Civil, Inc. (Branch) formerly Branch Highways, Inc., as the Offeror, is pleased to submit to the Virginia Department of Transportation (VDOT) this Letter of Submittal and accompanying Attachments in response to the Request for Proposals dated September 27, 2016 and revised by Addendum No. 1 dated October 14, 2016, Addendum No. 2 dated November 10, 2016, Addendum No. 3 dated December 2, 2016, Addendum No. 4 dated December 5, 2016, and Addendum No. 5 dated December 14, 2016 for the above-referenced project.

Section 4.1.1 Branch Civil, Inc. will be the legal entity who will execute the Contract with VDOT. The address for Branch is as follows:
   Branch Civil, Inc. • P.O. Box 40004 • Roanoke, VA 24022

Section 4.1.2 Branch Civil, Inc., if selected, will enter into a contract with VDOT for the Project in accordance with the terms of this RFP.

Section 4.1.3 Pursuant to Part 1, Section 8.2, Branch Civil, Inc., declares that the offer represented by the Price Proposal will remain in full force and effect for one hundred twenty (120) days after the date the Proposal is submitted to VDOT (“Letter of Submittal & Price Proposal Due Date”).

Section 4.1.4 Mr. Yishak Shata will serve as the Point of Contact for Branch Civil, Inc.
   Mr. Yishak Shata, Design-Build Project Manager
   Address: 10440 Balls Ford Road, Suite 270, Manassas, VA 20109
   Tel: (571) 379-5603
   Fax: (571) 379-5896
   Email: Yishak.Shata@branchcivil.com

Section 4.1.5 Mr. Patrick Bartorillo will serve as the Principal Officer for Branch Civil, Inc.
   Mr. Patrick Bartorillo, President
Section 4.1.6 Branch Civil, Inc. is a registered Corporation in the Commonwealth of Virginia. Branch Civil, Inc. will take full financial responsibility for the Project and has no known liability limitations.

Section 4.1.7 The Lead Contractor, Branch Civil, Inc., as the Offeror will serve as the prime/general contractor responsible for overall construction of the Project and will serve as the legal entity who will execute the Contract with VDOT. Whitman, Requardt & Associates, LLP (WRA) is the prime design consulting firm responsible for the overall design of this Project. Whitman, Requardt & Associates, LLP (WRA) is defined as the firm proposed by the Offeror to provide the Quality Assurance Manager for the Project.

Section 4.1.8 Branch Civil, Inc.'s VDOT prequalification number is Vendor ID B319 and the current status is Active. See Section 4.2.3 VDOT Prequalification Information for Evidence.

Section 4.1.9 Branch Civil, Inc. is committed to achieving a fourteen percent (14%) DBE participation goal for the entire value of the contract.

Section 4.1.10 Branch Civil, Inc. proposes a Final Completion Date of January 11, 2019.

The Branch Design-Build Team appreciates the opportunity to present this Letter of Submittal and accompanying Attachments. We eagerly anticipate yet another successful delivery with this endeavor.

Sincerely,

Branch Civil, Inc.

ATTACHMENT 4.2.2(a)  
CERTIFICATION REGARDING DEBARMENT  
PRIMARCCOVEREDTRANSACTIONS  

Project No.: 0095-111-278  

1) The prospective primary participant certifies to the best of its knowledge and belief, that it and its principals:

   a) Are not presently debarred, suspended, proposed for debarment, declared ineligible, or voluntarily excluded from covered transactions by any Federal department or agency.

   b) Have not within a three-year period preceding this proposal been convicted of or had a civil judgment rendered against them for commission of fraud or a criminal offense in connection with obtaining, attempting to obtain, or performing a public (Federal, State or local) transaction or contract under a public transaction; and have not been convicted of any violations of Federal or State antitrust statutes or commission of embezzlement, theft, forgery, bribery, falsification, or destruction of records, making false statements, or receiving stolen property;

   c) Are not presently indicted for or otherwise criminally or civilly charged by a governmental entity (Federal, State or local) with commission of any of the offenses enumerated in paragraph 1) b) of this certification; and

   d) Have not within a three-year period preceding this application/proposal had one or more public transactions (Federal, State or local) terminated for cause or default.

2) Where the prospective primary participant is unable to certify to any of the statements in this certification, such prospective participant shall attach an explanation to this proposal.

The undersigned makes the foregoing statements to be filed with the proposal submitted on behalf of the Offeror for contracts to be let by the Commonwealth Transportation Board.

City of Fredericksburg, Virginia
State Project No.: 0095-111-278
Federal Project No.: OC-095-2(53S)
Contract ID Number: C00107715DDB91

Dear Mr. Kindy:

The Hartford, through its operating entities, has issued surety bonds to Branch Civil, Inc., a subsidiary of The Branch Group since 1995. During this time we have favorably considered projects up to $150,000,000 with an aggregate program of $850,000,000 for member companies of The Branch Group. Our experience with Branch Civil, Inc. has been excellent, and we highly recommend them to you.

As surety for Branch Civil, Inc., The Hartford will favorably consider providing a 100% Performance Bond and a 100% Labor and Materials Payment Bond for the referenced project in the anticipated cost of construction and said bonds will cover the Project and any warranty periods as provided for in the Contract Documents on behalf of the Contractor, provided a contract is awarded to, and executed by Branch Civil, Inc.

Please understand that any arrangement for any bonds is a matter between Branch Civil, Inc. and The Hartford and we assume no liability to third parties or you if, for any reason, we do not issue requested bonds.
The Hartford expressly reserves the right to review the terms and conditions of the contract, contract amount and bond form, evaluate pertinent underwriting data, and verify the adequacy of project financing prior to the issuance of bonds for the referenced project.

Branch Civil, Inc. bonds are issued through Hartford Fire Insurance Company which is listed on the U.S. Treasury Department List and has an A.M. Best Rating of “A+” with Financial Size Category: XV ($2 Billion or greater). They are licensed to do business in the State of Virginia.

This letter will expire one hundred and eighty (180) days from the above date.

Sincerely,

[Signature]

CERTIFICATE OF FACT

I Certify the Following from the Records of the Commission:

On August 10, 2000, a statement of registration as a foreign registered limited liability partnership was filed in the Clerk's Office of the Commission by Whitman, Requardt & Associates, LLP, a Maryland partnership.

As of the date below, this statement of registration is in effect.

Nothing more is hereby certified.

Signed and Sealed at Richmond on this Date:
July 7, 2016

Joel H. Peck, Clerk of the Commission
Commonwealth of Virginia

STATE CORPORATION COMMISSION

Richmond, August 10, 2000

This is to Certify that the statement of registration of

Whitman, Requardt & Associates, LLP

a limited liability partnership registered under the laws of MARYLAND; was this day admitted to record in this office and that the partnership is registered to transact business in Virginia as a foreign Registered Limited Liability Partnership, subject to all laws applicable to the partnership and its business.

State Corporation Commission
Attest:

Clerk of the Commission
RECEIPT

RE: WHITMAN, REQUARDT & ASSOCIATES, LLP

ID: K000382 - 4

DCN: 16-06-14-0536

Dear Customer:

This is your receipt for $50.00 to cover the fee for filing the annual continuation report for the above-referenced registered limited liability partnership.

The annual continuation report was filed on June 14, 2016.

If you have any questions, please call (804) 371-9733 or toll-free in Virginia, 1-866-722-2551

Sincerely,

Joel H. Peck
Clerk of the Commission

Verifiable Evidence of Performance

- Completion Under Budget
- Completion On Time of ~9 Miles of 1-95 Express Lanes & Widening
- Several Field Design Changes to Mitigate Geotechnical Challenges
- Coordination with Bridge, ITS, MSE/Retention/Soundwall throughout the Corridor
- No Significant Quality Control Deficiencies
- No Employee Ingress/Egress Accidents

Scope & Complexity Similarities

- Identical I-95 Corridor Location/Traffic Volume
- VDOT Design-Build
- FHWA Guidelines and Requirements
- Interstate Construction/Widening
- Complex Construction
- Soundwall Construction
- ITS and Lighting Facilities
- ROW Acquisition
- Utility Relocations
- Medium Crossovers
- Environmental Permitting and Monitoring
- Geotechnical Challenges and Treatments
- TMP/High Volume MOT
- Public Involvement/Communications
- QA/QC Coordination

As a key contractor for this project, Branch was the primary contractor/coordinator of the 9 new miles of roadways (Segment 1), which extended the I-95 HOT/Express Lanes from just south of Exit 152 in Dumfries to Exit 143 in Garrisonville. Similar to the work on the I-95 at Route 3 Project, Segment 1 included construction of new Express Lanes in the median between existing general purpose lanes and general purpose lane widening in three locations totaling over 7,500 LF, to provide ingress and egress to the newly constructed HOT/Express lanes. Major items of work in this corridor were clearing, erosion and sediment control in highly sensitive areas, nearly 1,000,000 CY of earthwork, extensive drainage improvements, box culverts, sound wall construction for nearly the entire length of the project, 2 new flyover bridges with interchange improvements, MSE & retaining walls, and installation of ITS & electrical components. Extensive coordination was necessary with other trades and contractors on the project to ensure that all work was performed in the most cost effective, efficient way possible.

One of the first contractors to join the project, Branch participated in working design review meetings, providing constructability analysis before and during construction. The schedule for this project was critical, requiring precise coordination between all major work types in order to bring the project to a successful completion in such a short amount of time. Through careful planning and extensive coordination, Branch was able to accelerate the schedule for their contractual work, which included: All Earthwork including access and final grading, MSE Retaining Walls/Bridge Approaches, Subbase, Soil Nail Retaining Wall, RR3 Retaining Walls, Storm Drainage, Retention Ponds, Water Quality Structures, Paved Ditches, Ed&S Control, Wetland Protection, MOT, and Demolition.

Branch also coordinated with and provided additional access grading for the following activities performed by other subcontractors, such that all phases of work could achieve their respective milestones: Bridges & Abutments, Soundwalls, Permanent Barrier Wall, ITS & VDOT Utilities, Paving, Signage, Guardrail, and Pavement Markings. Branch played an active role in mitigating various conflicts and challenges throughout the project. Numerous Field Design Changes (FDC) were initiated to resolve design conflicts and make efficient use of onsite material. These FDC’s resulted in reductions to both cost and schedule. One of the first priorities was designing safe ingress/egress throughout the project. Construction entrances were designed to minimize impacts to the traveling public and reduce cost by utilizing existing guardrail and shoulder facilities wherever possible. Diligent maintenance to these entrances ensured that minimal repairs were needed at the conclusion of the project.

High plasticity clay, highly weathered acidic rock, and saturated materials each posed its own set of geotechnical concerns, and were dealt with on a case-by-case basis. Although offsite disposal was employed for the worst material encountered, thorough analysis of in-situ materials presented the opportunity to utilize mechanical and chemical manipulation to generate suitable roadway fill. These methods accelerated schedule, and in some cases reduced cost. It is likely that similar conditions will be encountered on the proposed I-95 at Route 3 Project, and Branch has the proven knowledge and experience to mitigate them efficiently and effectively.

The extensive noise barrier requirements on this project placed an enormous demand on available design and fabrication resources. The I-95 at Route 3 project may encounter similar instances as many projects along the corridor have proposed noise barriers that will be under construction at the same time. Our experience and relationships with local wall suppliers make us uniquely suited to manage this work effectively. ITS and electrical work was another key component that this project shares with the I-95 at Route 3 Project; coordination with the design and construction of the roadway prism was critical to allow for ample time for installation and testing of ITS & electrical facilities.

**h. Narrative describing the Work Performed by the Firm identified as the Lead Contractor for this procurement.**

Branch was the PPTA/Design-Build Contractor providing design, construction, right of way, utility relocation for the $54M Route 15 (James Madison Highway) Improvements for Prince William County (PWC) in Haymarket, VA. This high-profile project consisted of 22 lane miles of road widening that entailed the same major scope items to the I-95 at Route 3, such as mass earthwork and grading, drainage, structural concrete work, stone base, and paving. On any major project, but particularly on a Design-Build, a strong leadership team is the fundamental building block to a successful endeavor. Our experienced management personnel successfully led the Design-Build team through the complex design, permitting, construction processes throughout the course of this project. Prince William County had expressed many concerns with the project with both the functionality of the finished product and the time during which the public would be impacted by construction visible project. In order to manage these concerns, Branch’s team made a concerted effort to keep all concerned parties informed of project progress. This was accomplished through daily meetings onsite, weekly team progress meetings, and public outreach. VDOT, Prince William County, private utility owners, and affected adjacent homeowners were all involved in the planning, design, and scheduling of the work. This collaborative approach proved invaluable in the project’s successful completion.

Several potential problems were encountered and resolved throughout the life of the project that will likely be faced on the I-95 at Route 3 Project. In the design phase, it was determined that wetlands would be impacted as a result of the proposed work, and therefore environmental permitting (and associated coordination with multiple governing agencies) and wetlands mitigation strategies had to be developed to address those impacts, while minimizing impact on cost and schedule. There were also similar geotechnical challenges encountered; wet soils, highly plastic clays, and the presence of rock were each handled in multiple locations along the project.

The Northern Virginia area is known for its high traffic density, and the effects of road improvement construction on already overcrowded roadways. This was no different for the Route 15 Design-Build/PPTA Project. Spanning between two major commuter intersections, one an interstate interchange, Branch’s team knew that special attention to Maintenance of Traffic would be essential to not only ensure the safety of workers on-site, but to also provide safe, well communicated TMP for the public that would have minimal impact on this highly congested corridor. Phased signalized intersection construction, signage, temporary pavement markings, and carefully planned ingress/egress locations were a few major elements of this plan. A similar analysis will be performed for the I-95 at Route 3 Project so that its specific needs with regards to traffic influence and safety can be adequately addressed.

Comparable to the I-95 at Route 3 Project, this complex project had many unique elements that had to be properly understood, planned, and coordinated with one another. The exceptional coordination, cooperation, and communication skills demonstrated by Branch’s team for this project are a testament to the successful execution and delivery of the Route 15 PPTA, as they will be on the I-95 at Route 3 Project.

h. Narrative describing the Work Performed by the Firm identified as the Lead Contractor for this procurement. If the Offeror chooses to submit work completed by an affiliated or subsidiary company of the Lead Contractor, identify the full legal name of the affiliate or subsidiary and the role they will have on this Project, so the relevancy of that work can be considered accordingly. The Work History Form shall include only one singular project. Projects with multiple phases, segments, elements, and/or contracts shall not be considered a single project. If a project listed includes multiple phases, segments, elements, and/or contracts, the SOQ may be rendered non-responsive. In any case, only the first phase, segment, element, and/or contract listed will be evaluated.

As the Design-Build Contractor for this second phase of the Route 58 PPTA Corridor Improvements project, Branch was responsible for design, construction, right-of-way acquisition, utility relocation, permitting, roadway construction, construction of 17 acres of wetlands, and extensive stream mitigation, the project included 8 bridges and 3 full interchanges – one of which ties into I-77 southwest of Hillsville, VA. This 4-year, $83M project was completed by the Branch Team finished within contractual obligations for both substantial and final completions and within original budget, with no contractor initiated change orders, and no major quality or safety issues.

Post-award additions of environmental surveys by the FHWA threatened to delay the Hillsville Bypass project by a full construction season. Working together, VDOT, FHWA, and the Branch Project Team revised the design and construction schedules to mitigate these impacts resulting in no additional costs to VDOT (besides the actual surveys) and no delay to the project. Branch recognizes that the permitting process that will be a part of the I-95 at Route 3 Project may pose similar risks, and based on experience on this project and others, will incorporate realistic time frames into the plan and schedule for the permitting process for this project.

After construction had begun, VDOT received multiple requests by local elected officials for changes to the lighting at the interchanges on the project. The Project Team, VDOT, and the local officials found common ground through frank and open discussions. While Branch had to perform additional work under previously unnecessary “live traffic conditions,” the overall schedule was maintained and no extra costs were incurred by VDOT, despite the late-date changes. While it is unlikely that lighting specifically will be a politically driven issue that requires similar attention on the I-95 at Route 3 Project, there is a potential that environmental concerns, particularly with regard to soundwall location and design, may arise. The organizational structure Branch has developed for the I-95 at Route 3 positions the team to address these concerns as they come up. Together with VDOT and other stakeholders, the Branch/WRA Team will find solutions that fit the best interests of all involved.

Over the 3.2 miles of this project, Branch encountered numerous differing soils types, including those typically deemed to be unsuitable in-situ. Working with geotechnical engineers and the Quality Assurance team, strategies were developed to handle these materials that had minimal impacts to cost and schedule, while still meeting all required specifications. A significant portion of subgrade material was treated with 11% soil cement. In other areas, undercut and replacement, mechanical drying, lime drying, and lime stabilization methods were used to treat unacceptable materials. It should be anticipated that similarly varying soils types will be encountered on the I-95 at Route 3, and Branch is experienced at choosing the best method of treatment that maximizes the benefit to all invested parties.

The Route 58 Hillsville Bypass project was a highly visible, complex project that attracted significant public attention and frequent questions. The organizational structure for this project, which created a balanced, clear and effective communication model among Key Personnel and VDOT was essential for handling these issues in an efficient, professional manner. The success of Branch’s on-going management of this project is evidenced by the continued award of subsequent phases of the massive Route 58 Corridor Improvements PPTA Project.

- Interstate Widening
- Signalized Intersection
- Environmental
- Geotechnical
- Hydraulics and SWM
- Signing/Lighting/ITS
- TMP
- VMT and Interstate Lane Closures
- Public Involvement/Communications
- QA/QC
- Construction Engineering

WRA’s Role – WRA was the prime design firm for this Design-Build project responsible for preparing final engineering design documents and approvals for improvements to I-95/I-495 at Arena Drive. The project was designed in our Baltimore, Maryland office. The project enabled the Arena Drive interchange with I-95/I-495 (Capital Beltway) to operate as a full-time interchange instead of only during special events. I-95/I-495 was widened for an additional lane and incorporated two collector-distributor lanes. The project features include:

Roadway Rehabilitation and Widening – 1.9 miles of median widening on the I-95/I-495 for additional lanes in each direction. Additionally, the I-95/I-495 typical section was reconfigured from four through-lanes only to three through-lanes with two collector-distributor lanes. The collector-distributor lanes provide access to/from three interchanges: MD 214, Arena Drive and MD 202.

Interchange Reconstruction – Ramps at two interchanges were reconfigured to eliminate inadequate weaving lengths on I-95/I-495. The northeast and northwest loop ramp at MD 214 and northwest ramp at MD 202 were eliminated. Existing quadrant ramps were widened to accommodate additional traffic with new connections to MD 214 and MD 202. As a result of traffic analyses performed during final design, a ramp from MD 202 to I-95/I-495 was identified as needing to be widened to address congestion along MD 202. As a modification to the contract, an Interstate Modification Report (IMR) was completed and ramp widening was designed and constructed, including additional NEPA approval and environmental permitting.

Hydraulic Analysis and Stormwater Management (SWM) – WRA re-evaluated the conceptual SWM plan provided by MSHA and determined that only one of two proposed SWM facilities was required to meet the project’s SWM needs. By eliminating the second facility, to be constructed in a loop ramp, over five (5) acres of existing forest was saved. For the remaining proposed SWM facility, a 48” RCP was jacked and bored under SB I-95/I-495 while traffic was maintained.

Geotechnical and Pavement Analysis/Design – Geotechnical services included jacking and boring a 48” RCP under I-95/I-495, a reinforced slope, and subgrade and pavement design for full-depth pavement and the rehabilitation of existing concrete pavement. Also, the existing shoulders along I-95/I-495 were analyzed for traffic bearing capacity during construction and it was determined that the shoulders were adequate for temporary use and did not required full-depth replacement.

Maintenance of Traffic – Extensive multi-phase maintenance of traffic plans were required on I-95/I-495, MD 214 and MD 202 to maintain traffic throughout the interchanges since over 190,000 vehicles per day traveled on I-95/I-495 at that time. To maintain adequate levels of service for traffic during construction, all lanes were required to remain open during peak hours of 6 to 9 AM and 3 to 7 PM. Limited lane closures were permitted from 9 AM to 3 PM, while multiple lane closures were permitted from 10 PM to 5 AM. As a result, a majority of the pavement resurfacing for the project was performed during nighttime hours.

Traffic Control Devices – The project included modification of intersections on Arena Drive including four new traffic signals installed with modifications to another existing traffic signal. This project re-used six (6) existing sign structures, including two cantilever, two overhead and two overhead dynamic message systems. These sign structures were relatively new and were relocated onto new foundations and fitted with new or modified sign panels. Additionally, four new cantilever structures were installed and all ground-mounted signing through the three interchanges was upgraded. Partial interchange roadway lighting was completed consisting of 80 new light fixtures.

Public Involvement – Public information materials and advanced notification of traffic impacts were provided to MSHA to keep the public informed. Partnering During Design and Construction – WRA participated in partnering agreement, which set goals and objectives during the early stages of work. Subsequent monthly meetings were held to ensure goals and objectives were being met by discussing the project progress, quality, resolve issues and current/future schedule.

**WRA’s Role:** Whitman, Requardt & Associates, LLP was selected as the prime designer to provide engineering services to VDOT for the study and final design of an interchange at the intersection of the Fairfax County Parkway and Fair Lakes Parkway/Monument Drive intersection. WRA completed approximately 90% of the design services from our Virginia offices. The project was partially funded with ARRA funding for construction, which required extensive coordination with FHWA. The project features include:

**Project Description/Narrative: Roadway Reconstruction and Widening** – 2.3 miles of Fairfax County Parkway (FCP) was widened into the median increasing the number of lanes from 4 to 6 and 0.7 miles was totally reconstructed to facilitate raising FCP up and over Fair Lakes Parkway and Monument Drive. Over 3,000 feet of Fairfax County Parkway was widened/reconstructed to provide additional turn lanes.

**Interchange Design** – The project included the design of a Split-Diamond Interchange to provide access to both Fair Lakes Parkway and Monument Drive. The four ramps intersected with both Fair Lakes Parkway and Monument Drive at coordinated signalized intersections with multi-lane approaches.

**Hydraulic Analysis** – The project contained a major drainage outfall to the Rocky Run Stream through an 800-foot long triple 8’x10’ box culvert under Ramps B and C and Fairfax County Parkway. The project also included a single 400-foot long 7’ x 8’ box culvert under Ramp B and C and Fairfax County Parkway. Additionally, Fairfax County Parkway and Fair Lakes Parkway are located on dams for regional stormwater management lakes, which are regulated by DEQ. The dam was being modified by the project and a new stormwater outfall was extended into the existing lake to provide water quality requirements for the project. This required WRA to complete a dam break analysis and coordination for review of the dam modification with DEQ and Fairfax County.

**Structural Design** – The bridge design efforts included the complete design of two single-span structures consisting of precast bulb tee beams spanning 116’ and 142’, each with a width of 124’. Abutments consisted of semi-integral concrete seats on steel piles with MSE retaining walls imprinted with an architectural finish of ashlar stone. The design included under bridge lighting for the sidewalks and pedestrian movements. The project also included widening the Fairfax County Parkway Bridge over Route 50 by adding two additional travel lanes in the median. The bridge widening consisted of two span structural steel plate girders totaling 220’ in length set on a new concrete pier aesthetically similar to the existing piers. The design included over 43,000 sf of retaining walls including MSE, Pile Panel, Soil Nail and over 70,000 sf of sound barriers. The ashlar stone finish from the bridge abutments was carried through to all wall elements to create an appealing appearance to this gateway to the Fair Lakes Community. The geotechnical design efforts included an evaluation of all of the walls and the final design of bridge foundations. The retaining wall featured a two-tier soil nail wall, which was one of the first soil nail walls utilized by VDOT.

**Public Involvement/Communications** – The project included freeway overhead signing for the I-66, Fair Lakes Parkway and Route 50 interchanges including ITS facilities. Signals were designed for 7 intersections with coordinated signal timing plans to ensure the efficient flow of traffic through the project.

**Traffic Control Devices** – The project included freeway overhead signing for the I-66, Fair Lakes Parkway and Route 50 interchanges including ITS facilities. Signals were designed for 7 intersections with coordinated signal timing plans to ensure the efficient flow of traffic through the project.

**Public Involvement** – Since the 1980s, the Fair Lakes Community has maintained the VDOT right-of-way with landscaping, decorative signage, mowing, and reserved the right-of-way for the future interchange project. WRA led a series of meetings with the Fair Lakes League that resulted in the acceptance of the project, donation of right-of-way/easements and utilization of existing private regional stormwater management facilities for the project. Resulting in significant cost savings to the project. The finished project will enhance the community and provide significant improvements to traffic operations. WRA also developed materials for both a Citizens’ Information Meeting and a Design Public Hearing.

### Scope & Complexity Similarities

- Interchange
- Roadway Widening
- Utility Relocations Design (Water and Sewer)
- Traffic signal
- Intersection Design
- Geotechnical
- Hydraulics
- Traffic Control Devices
- TMP
- MOT
- Public Involvement/Communications
- QA/QC
- Construction Engineering

### Verifiable Evidence of Good Performance

- Detailed traffic analyses of each phase of construction resulted in improved traffic operations during construction.
- Innovative approach to stormwater management reduced right-of-way impacts and costs.
- Early public outreach resulted in true enhancements to the final project.

WRA’s Role: Prime design firm responsible for the final engineering design documents and approvals for major improvements to the existing Fall Hill Avenue corridor and extension of Mary Washington Boulevard. WRA completed over 90% of the design for our Virginia offices. Existing Fall Hill Avenue is largely a two-lane roadway with no bike facilities and limited pedestrian facilities. Along the project alignment are the Snowden Park, Rappahannock Canal Park and several historic resources that are impacted by the project construction requiring strict adherence to all commitments in the environmental document. The project was led from the WRA Richmond, VA office and additional design support was performed from the Baltimore, MD office. Services included highway design, hydrologic and hydraulic design, stormwater management (SWM) design, erosion and sediment control design, geotechnical engineering, pavement evaluation and design, noise analysis and soundwall design, maintenance of traffic, signing, lighting, pavement markings, traffic signalization, bridge, retaining walls, park design, utility relocation/coordination, public involvement, permitting and coordination with project stakeholders. Also, WRA is providing quality control and construction inspection related services.

Roadway – The proposed improvements provide for a four-lane divided curb and gutter urban typical section with a 10-foot shared-use path on the north side and a 5-foot sidewalk on the south side of the project. The project was designed to accommodate the future needs for Fall Hill Avenue. Mary Washington Boulevard is extended on new location for 0.3 miles with an urban section including a sidewalk on the west side and the existing Rappahannock Canal trail network providing for bike and pedestrians to the east and intersects with Fall Hill Avenue. The project design was completed on schedule with minimal VDOT comments.

WRA’s innovative design approach to the bridge reduced construction and future maintenance costs, improve constructability, by eliminating the longitudinal joints across the bridge, utilizing the MSE wall abutments, and providing semi-integral abutments.

**Verifiable Evidence of Performance**

- The project design was completed on schedule with minimal VDOT comments.
- WRA’s innovative design approach to the bridge reduced construction and future maintenance costs, improve constructability, by eliminating the longitudinal joints across the bridge, utilizing the MSE wall abutments, and providing semi-integral abutments.

**Hydraulic Analysis and Stormwater Management** – The project includes the design and analysis of a tributary to the Rappahannock Canal, which required a 100-year storm event to have no impact on private property. A complete new storm drainage system was provided for the length of Fall Hill Avenue. WRA’s design was able to eliminate one SWM facility on the frontage of a commercial property saving VDOT approximately $300,000 in right-of-way cost.

**Geotechnical Engineering** – The project is located in diverse and changing geology. The western portion of the project is located over relatively shallow residual soils of the Piedmont Province, while the eastern portion is more typical of the Coastal Plain Province with over-consolidated Potomac Clays. The bridge over I-95 is supported on driven steel H-piles with MSE wall abutments and were designed to mitigate downdrag forces induced by settlement. The design in the Potomac Clays included 20-foot cuts below the location of the historic civil war trenches. To avoid impacts to the trenches WRA designed a soil nail retaining wall.

**TMP and MOT Plans** – The two major elements of the TMP were the phased construction of the bridge over I-95 and the three-phase reconstruction of Fall Hill Avenue. The TMP carefully evaluated the impacts to traffic operations on I-95 for placement of concrete barrier, beams and removal of the existing bridge. WRA’s efforts was to carefully evaluate the high pedestrian movements along the corridor to provide opportunities for residents to access the transit stops along the corridor and access the extensive system of trails in the City.

**Traffic Engineering** – The project includes the design of three traffic signals and three pedestrian crossing using Rectangular Rapid Flash Beacons (RRFBs). A major focus of WRA efforts was to carefully evaluate the high pedestrian movements along the corridor to provide opportunities for residents to access the transit stops along the corridor and access the extensive system of trails in the City.

**Public Involvement** – A key element of the success of the project is communicating the goals of the project and how the project affects the public. The project included significant public involvement and communications restricting movements and movements from and developments, which was a major public discussion item at the “Pardon Our Dust” public meeting and the public’s concern with the traffic operations at the proposed roundabout. Being able to address these concerns quickly and effectively with the VDOT Team resulted in the project moving forward with minimal redesign efforts.

EXHIBIT 6.3(a)
ADJUSTMENT FOR ASPHALT

SPECIAL PROVISION FOR
ASPHALT MATERIAL PRICE ADJUSTMENT for DESIGN-BUILD PROJECTS

September 26, 2016

All asphalt material listed in the attached “Master Listing of Asphalt Material Items Eligible for Price Adjustment” will be adjusted in accordance with the provisions as set forth herein. Other items will not be adjusted, except as otherwise specified in the contract. Any item added through a Work Order which contains Asphalt Material will not be subject to Price Adjustment unless specifically designated in the Work Order to be subject to Price Adjustment.

Each month, the Department will publish an average state-wide PG 64S-22 f.o.b. price per ton and an average PG 64E-22 f.o.b. price per ton developed from the average terminal prices provided to the Department from suppliers of asphalt cement to contractors doing work in Virginia. The Department will collect terminal prices from approximately 12 terminals each month. These prices will be received once each month from suppliers on or about the last weekday of the month. The high and low prices will be eliminated and the remaining values averaged to establish the average statewide price for the following month. That monthly state-wide average price will be posted on the Scheduling and Contracts Division website on or about the first weekday of the following month. In the event the average prices were to change 10 percent or more of the Base Index during the middle of the month, the Design Builder can submit a letter to the Department and the supplier that provides evidence of the difference in price. Upon receipt of the letter consideration will be given to extend additional adjustments as deemed necessary.

This monthly statewide average price will be the Base Index for all contracts on which Proposals are received during the calendar month of its posting and will be the Current Index for all asphalt placed during the calendar month of its posting. In the event an index changes radically from the apparent trend, as determined by the Engineer, the Department may establish an index which is determined to best reflect the trend.

The amount of adjustment applied will be based on the difference between the Price Proposal Contract Base Index and the Current Index for the applicable calendar month during which the work is performed. Calculations must be done for each type of Asphalt Material put in place each month, whether the Current Index is higher or lower than the Base Index. The calculation for the adjustment shall be shown as follows:

\[ A = Q \times \%AC \times IC \]

Where:  
\[ A \] = Asphalt Adjustment Dollar Amount  
\[ Q \] = Quantity of Asphalt Material put in place during the month  
\[ \%AC \] = % of Asphalt Cement in the Asphalt Material as specified in the Job Mix Formula  
\[ IC \] = Numeric Dollar Difference, either positive or negative, between the Base Index and Current Index

Example Calculation for Negative Price Adjustment (Credit back to VDOT):  
7,500 Tons of SM-12.5A put in place during the month (Q), Job Mix is 6.1% Asphalt Cement for SM-12.5A (%AC), Base Index for the Contract is $515/Ton, Current Index is $500/Ton, Difference of - $15.00/Ton (IC)

\[ 7,500 \text{ Tons SM-12.5A} \times 6.1\% \times - \$15.00/\text{Ton} = - \$6,862.50 \text{ Adjustment Amount} \]

Example Calculation for Positive Price Adjustment (Paid to the Design-Builder):  
10,000 Tons of BM-25.0A put in place during the month (Q), Job Mix is 5.2% Asphalt Cement for BM-25.0A (%AC), Base Index for the Contract is $515/Ton, Current Index is $560/Ton, Difference of + $45.00/Ton (IC)

\[ 10,000 \text{ Tons BM-25.0A} \times 5.2\% \times + \$45.00/\text{Ton} = + \$23,400.00 \text{ Adjustment Amount} \]
Adjustment of any asphalt material item designated as a price adjustment item which does not contain PG 64-22, except PG 76-22 or PG 70-28, will be based on the indexes for PG 64-22. The quantity of asphalt cement for asphalt concrete pavement to which adjustment will be applied will be the quantity based on the percent of asphalt cement shown on the appropriate approved job mix formula.

The quantity of asphalt emulsion for surface treatments to which adjustment will be applied will be the quantity based on 65 percent residual asphalt.

Price adjustment will be shown as a separate entry on the monthly application of payment for work packages completed; however, such adjustment will not be included in the total cost of the work for progress determination or for extension of contract time. Items the Design-Builder claims in its application of payment for asphalt adjustments must include supporting calculations certified by the Quality Assurance Manager (QAM). These calculations must be completed relative to the calendar month under which the work was performed and shall be submitted for either positive or negative adjustment.

Any apparent attempt to unbalance bids in favor of items subject to price adjustment or failure to submit required cost and price data as noted hereinbefore may result in rejection of items for asphalt adjustment.

COMMONWEALTH OF VIRGINIA
DEPARTMENT OF TRANSPORTATION
ASPHALT PRICE ADJUSTMENT (PG76-22 or PG 70-28)
DESIGN-BUILD PROJECTS

INSTRUCTIONS - This form is to be completed and returned ONLY when asphalt concrete items containing PG 76-22 or PG 70-28 is being utilized on the project.

PROJECT NUMBER: 0095-111-278, P101, R201, C501

DISTRICT: Fredericksburg

Bid Prices in this contract for items containing PG 76-22 or PG 70 asphalt cement were developed using a f.o.b. price of $468.43 Per IMPERIAL ton for PG 76-22 or PG 70-28. This quote is project specific.

Price quotes signed by each supplier from which the Design-Builder proposes to obtain PG 76-22 or PG 70-28 shall be maintained by the Design-Builder. These quotes shall be retained on site during the life of the Contract for review by the Engineer upon request.

EXHIBIT 6.3 (c)
ADJUSTMENT FOR FUEL

VIRGINIA DEPARTMENT OF TRANSPORTATION
SPECIAL PROVISION FOR
OPTIONAL ADJUSTMENT FOR FUEL
DESIGN-BUILD PROJECTS

June 30, 2011

In the event the Design-Builder elects to seek adjustment for fuel items designated in the Price Proposal Contract as Price Adjustment Items such items will be subject to price adjustment as set forth herein. Other items will not be adjusted, except as otherwise specified in the contract.

The Design-Builder will submit their monthly application for payment associated with eligible work packages with an adjustment up or down as appropriate for cost changes in fuel used on specific items of work identified in this provision. A master listing of standard items eligible for fuel adjustment is provided by the Department on its website at the following link http://www.virniadot.org/business/resources/masteroptionalfuelitems.pdf. The listing on the web site also includes the corresponding fuel factor for each item. The fuel usage factor for each item is considered inclusive of all fuel usage.

The amount of adjustment will be computed from the change in the indexes and the on-site fuel use as shown in the Department’s master listing of eligible items.

In order to be eligible for fuel adjustment under this provision, the Design-Builder shall clearly identify in within the Schedule of Values those pay items and the associated quantities it chooses to have fuel adjustment applied to in its work packages. Items the Design-Builder claims in its application of payment for fuel adjustments must be properly designated in order to be considered for adjustment. Items not properly designated or left out of the Design-Builder’s Schedule of Values will automatically not be considered for adjustment.

The monthly index price to be used in the administration of this provision will be calculated by the Department from the Diesel fuel prices published by the U. S. Department of Energy, Energy Information Administration on highway diesel prices, for the Lower Atlantic region. The monthly index price will be the price for diesel fuel calculated by averaging each of the weekly posted prices for that particular month.

For the purposes of this provision, the base index price will be calculated using the data from the month preceding the receipt of bids. The base index price will be posted by the Department at the beginning of the month for all bids received during that month.

The current index price will be posted by the Department and will be calculated using the data from the month preceding the particular estimate being vouchered for payment.

The current monthly quantity for eligible items of work selected by the Design-Builder for fuel adjustment in its work packages will be multiplied by the appropriate fuel factor to determine the gallons of fuel to be cost adjusted. The amount of adjustment per gallon will be the net difference between the current index price and the base index price. Computation for adjustment will be made as follows:
\[ S = (E - B) \times Q \times F \]

Where:
- \( S \) = Monetary amount of the adjustment (plus or minus)
- \( B \) = Base index price
- \( E \) = Current index price
- \( Q \) = Quantity of individual units of work
- \( F \) = Appropriate fuel factor

Adjustments will not be made for work performed beyond the original contract time limit unless the original time limit has been changed by an executed Work Order.

If new pay items are added to this contract by Work Order and they are listed in the Department’s master listing of eligible items, the Work Order must indicate which of these individual items will be fuel adjusted; otherwise, those items will not be fuel adjusted. If applicable, designating which new pay items will be added for fuel adjustment must be determined during development of the Work Order and clearly shown on the Work Order form. The Base Index price on any new eligible pay items added by Work Order will be the Base Index price posted for the month in which bids were received for that particular project. The Current Index price for any new eligible pay items added by Work Order will be the Index price posted for the month preceding the estimate on which the Work Order is paid.

When quantities differ between the last monthly application of payment prepared upon final acceptance and the final application of payment, adjustment will be made using the appropriate current index for the period in which that specific item of work was last performed.

In the event any of the base fuel prices in this contract increase more than 100 percent (i.e. fuel prices double), the Department will review each affected item of work and give the Design-Builder written notice if work is to stop on any affected item of work. The Department reserves the right to reduce, eliminate or renegotiate the price for remaining portions of affected items of work.

Any amounts resulting from fuel adjustment will not be included in the total cost of work for determination of progress or for extension of contract time.

- [ ] I elect to use this provision
- [ ] I elect not to use this provision

COMMONWEALTH OF VIRGINIA
DEPARTMENT OF TRANSPORTATION
PROPOSAL GUARANTY

KNOW ALL MEN BY THESE PRESENTS, THAT WE Branch Civil, Inc. As
principal, and Hartford Fire Insurance Company Surety, are held and firmly bound unto the
Commonwealth of Virginia as obligee, in the amount of FIVE PERCENT OF THE DOLLAR VALUE OF THE
BID, lawful money of the United States of America, for the payment of which, well and truly to be made, we
bind ourselves, our heirs, executors, administrators, successors and assigns, jointly and severally and firmly
by these presents.

SIGNED, sealed and dated this 4th Day of January 2017

WHEREAS, the above said principal is herewith submitting its proposal for:

PROJECT NUMBER: A DESIGN-BUILD PROJECT I-95 SAFETY IMPROVEMENTS AT ROUTE 3
State Project No.: 0095-111-278
Federal Project No.: OC-095-2535
Contract ID Number: C00107715DB91

NOW, THEREFORE, the condition of the above obligee is such, that if the aforesaid principal shall be
awarded the contract upon said proposal and shall within the time specified in the Specifications after the
notice of such award enter into a contract and give bond for the faithful performance of the contract, then this
obligation shall be null and void; otherwise to remain in full force and effect and the principal and surety will
pay unto the obligee the difference in money between the amount of the bid of the said principal and the
amount for which the obligee may legally contract with another party to perform the said work if the latter
amount be in excess of the former, but in no event shall the liability exceed the penal sum hereof.

1. I, the firm, corporation or officers, agents or employees thereof have neither directly nor indirectly entered into any combination or arrangement with any person, firm or corporation or entered into any agreement, participated in any collusion, or otherwise taken any action in restraint of free competitive bidding in connection with such contract, the effect of which is to prevent competition or increase the cost of construction or maintenance of roads or bridges.

During the preceding twelve months, I (we) have been a member of the following Highway Contractor's Associations, as defined in Section 33.1-336 of the Code of Virginia (1970). (If none, so state).

2. I (we) have ☑, have not ☐, participated in a previous contract or subcontract subject to the equal opportunity clause, as required by Executive Orders 10925, 11114, or 11246, and that I/We have ☑, have not ☐, filed with the joint Reporting Committee, the Director of the Office of Federal Contract Compliance, a Federal Government contracting or administering agency, or the former President's Committee on Equal Employment Opportunity, all reports due under the applicable filing requirements.

Note: The above certification is required by the Equal Employment Opportunity Regulations of the Secretary of Labor [41 CFR 60-1.7(b)(1)], and must be submitted by bidders and proposed subcontractors only in connection with contracts and subcontracts which are subject to the equal opportunity clause. Contracts and subcontracts which are exempt from the equal opportunity clause are set forth in 41 CFR 60-1.5. (Generally only contract or subcontracts of $10,000 or under are exempt.)

Currently, Standard Form 100 (EEO-1) is the only report required by the Executive Orders or implementing regulations.

Proposed prime contractors and subcontractors who have participated in a previous contract or subcontract subject to the Executive Orders and have not filed the required reports should note that 41 CFR 60-1.7(b)(1) prevents the award of contract and subcontract unless such contractor submits a report covering the delinquent period or such other period specified by the Federal Highway Administration or by the Director, Office of Federal Contract Compliance, U.S. Department of Labor.

3. The bidder certifies to the best of its knowledge and belief, that it and its principals:

(a) Are not presently debarred, suspended, proposed for debarment, declared ineligible or voluntarily excluded from covered transactions by any Federal department or agency;

(b) Have not within a three year period preceding this proposal been convicted of or had a civil judgment rendered against them for commission of fraud or a criminal offence in connection with obtaining, attempting to obtain, or performing a public (Federal, State or local) transaction or contract under a public transaction; violation of Federal or State antitrust statutes or commission of embezzlement, theft, forgery, bribery, falsification or destruction of records, making false statements, or receiving stolen property;

(c) Are not presently indicted for or otherwise criminally or civilly charged by a governmental entity (Federal, State or local) with commission of any of the offenses enumerated above; and

(d) Where the bidders is unable to certify to any of the statements in this certification, the bidder shall show an explanation below.

Explanations will not necessarily result in denial of award, but will be considered in determining bidder responsibility. For any explanation noted, indicate below to whom it applies, initiating agency, and dates of action. Providing false information may result in federal criminal prosecution or administration sanctions. The bidder shall provide immediate written notice to the Department if at any time the bidder learns that its certification was erroneous when submitted or has become erroneous by reason of change circumstances.

The undersigned is duly authorized by the bidder to make the foregoing statements to be filed with bids submitted on behalf of the bidder for contracts to be let by the Commonwealth Transportation Board.
