PEDESTRIAN ACCESS ROUTE DETAIL

Additional right-of-way is required if the limits of pedestrian access routes extend beyond existing or proposed VDOT right-of-way.

- Pedestrian access routes provide a continuous, unobstructed, stable, firm, and slip-resistant path connecting all accessible elements of a facility that can be approached, entered, and used by pedestrians.

- If pedestrian access routes are being provided, a minimum 4' traversable width is required with a max. 2% cross slope.

- When used in conjunction with standard CO-3 or CO-7, the curb face on this standard is to be adjusted to match the mountable curb configuration.
