

Pre-Approved and Rescinded Products Listings Procedures
Virginia Department Of Transportation
Traffic Engineering Division (TED) Central Office

May 22, 2009

This document provides procedures related to adding products that conform to current VDOT specifications to the Pre-Approved Traffic Control Device (TCD) Listing.

This document also provides information regarding the Rescinded Products Listing, which lists products that have been removed from the Pre-Approved Products Listing.

Pre-Approved Products Listing

General Information

Products on this list must conform to the VDOT Road and Bridge Specifications, approved specification revisions, and the Road and Bridge Standards for TCD's. Products can be submitted by vendors, manufacturers and sales companies for VDOT review. VDOT also solicits products for this listing and receives submittals from internal and external sources.

Product submittals (catalog cut sheets) shall provide documentation of conformance to VDOT requirements and shall be the manufacturer's official literature for the product submittal under review. Submittals are accepted in Acrobat Reader™ (PDF) or MS Word™ formats only.

Products shall be the manufacturer's specific product which is sold under that manufacturer's name. We do **not accept** third party products, i.e. products manufactured by one party but sold by a third party under the third party's name.

Products that conform to the VDOT requirements will be assigned a VDOT pre-approved number and included on the next listing update. Updates are posted quarterly.

Where project-specific special provisions, special provision copied notes, or plan notes modify VDOT's general specifications or standards for a product, those products on the listing may not be acceptable and therefore should not be submitted for use on that project.

Products NOT listed

This listing is not exclusive. Products NOT included on this listing may be used by Contractors. Catalog cut sheets may be submitted in accordance with Section **700.03** of the VDOT Road & Bridge Specifications for use of products not on this listing.

Material testing

Material testing is required for certain products on the listing. For each product where material testing is required a "YES" will be positioned in the column headed "Material Testing Required." Products requiring material testing, or a certification showing that the product has been tested in accordance with the VDOT Materials Division guidelines and procedures, shall be submitted to the VDOT Materials Division.

Rescinded Products Listing

General Information

Approved products may be removed from the Pre-Approved Listing and placed on the Rescinded Listing at VDOT's discretion. Rescinded products are typically those that have become obsolete, discontinued, or no

longer in accordance with VDOT specifications. Such products may be modified and resubmitted to VDOT using the standard pre-approval procedure.

Application of Rescinded Date

The date indicated for those rescinded items indicates the **first** date of rescission. Any equipment on the list for which approval has been rescinded will not be allowed for use if the rescinded date is earlier than the receipt of bids for the project.

New Products

For new products that are not addressed by current VDOT specifications, refer to the Materials Division's New Products policy. The Materials Division also maintains its own Approved Products List, which feature traffic-related products such as sign sheeting and pavement markings. Links to the Materials Division can be found below.
