1. Beginning July 1, 2012, High-Visibility Safety Apparel Requirements become effective regardless of the contracts’ Work Area Protection Manual date:
   - Daytime - All workers and flaggers shall wear high-visibility safety apparel that meets Performance Class 3 requirements of the ANSI/ISEA 107–2010 or equivalent revisions.
   - Nighttime, emergency situations and inclement weather (fog, rain, sleet, snow, etc.) - All flaggers as well as workers installing, maintaining and removing TTC devices in nighttime work zones shall wear Class E trousers in addition to the standard Performance Class 3 risk requirements of the ANSI/ISEA 107–2010 publication.
     i. Class E trouser must have a waist band; overalls and bibs are acceptable.
     ii. The company decides if Class E trouser satisfies the long pant requirement.
     iii. Nighttime high-visibility safety apparel that meets Performance Class 3 requirements of the ANSI/ISEA 107–2010 or equivalent revisions.
     iv. Hard Hat visibility – VDOT employees shall display 16 sq. inches of retro-reflectivity material, non-VDOT personnel are recommended to display at least 10 sq. inches but not required to do so.

2. Definition correction for Limited Access Highway based on the VA Supplement — change right of “way” to right of “light’.

3. Figure 6E-4, Flagger Requirement (Sheet 2 of 2) table is upgraded to reflect the distance from the flagger station to the work area and should be as shown:

<table>
<thead>
<tr>
<th>Posted Speed Distance (Feet)</th>
<th>25</th>
<th>30</th>
<th>35</th>
<th>40</th>
<th>45</th>
<th>50</th>
<th>55</th>
<th>60</th>
</tr>
</thead>
</table>

4. Work Vehicle Do Not Follow sign, G20-V1 – shall be mounted on the rear of a vehicle that is required to slow down considerably to enter and exit the work zone; such as dump trucks, water trucks hauling/delivering material (borrow or fill, asphalt, aggregate, etc.) to and from the work space.

5. Figure 6F-5, delete the following long-term stationary detour assembly sign:

6. Figure 6F-7, Advanced Warning Arrow Board Display Specifications – a light bulb is missing from the stem in the Move/Merge Right display. A total of 15 elements are needed as a minimum for a Type C Board.

7. Channelizing devices used to delineate an Arrow Board shall match the channelizing devices used in the taper; cones or drums.

8. All trailer mounted devices (PCMS, ITS cameras and speed trailers, AFAD, light tower, etc.) except arrow boards left inside the clear zone shall be delineated by four drums.
9. Figure 6F-9, Channelizing Devices - For the Vertical panel, where the height of the retroreflective material on the vertical panel is 36 inches or more, a stripe width of 6 inches shall be used. Where the height of the retroreflective material on the vertical panel is less than 36 inches, a stripe width of 4 inches may be used.

10. Group 2 Channelizing Devices (Drums) – may be left on the shoulder between work operations but must not interfere with the road user’s use of the shoulder or travel lanes.

11. Type 3 Barricade rail heights can be 8” to 12” instead of the 12” only as shown due to industry practices.

12. For Type 3 Barricades used to close a turn lane; stripes should slope down toward the side which you wish traffic to travel. Right turn lane closed should display the following: [diagram], left turn lane closed should display: [diagram], traffic flows both sides of a closed lane should display: [diagram] and a road closed should display: [diagram].

13. Section 6G.02 Work Duration (02) – E. Mobile is work that moves intermittently (1-15 minutes) or continuously.

14. TTC-3 (Mobile or Short Duration Shoulder Operations):
   - Note 8 - When the work operation is on the shoulder with a posted speed limit of 45 mph or greater, a shadow vehicle with a TMA shall be used.
   - When the work operation is off the shoulder:
     - Work duration 1–15 minutes, vehicle warning lights may be used on a work vehicle parked on the shoulder.
     - Work duration 15–60 minutes, vehicle warning lights and a truck mounted sign, (W20-V3, W20-V6, W20-1, etc.) or a sign on a portable sign support should be placed directly behind the work operations vehicle.

15. TTC-4 (Stationary Operation on a Shoulder Closure) – note 8:
   - Regardless of the work duration a shadow vehicle shall be used whenever a person is required to operate equipment mounted on or in the work vehicle such as buckets, augers, post drivers, etc.
   - For work duration (workers are present) on the shoulder that are greater than 1 hour a shadow vehicle shall be used.
   - A TMA shall be used on the shadow vehicles when closing a shoulder on Limited Access highway and multi-lane roadway with a posted speed of 45 mph or greater.

16. TTC-5 (Shoulder Operation with Minor Encroachment) – to clarify the use of right and left sign assemblies; on divided highways having a median wider than 8', right and left sign assemblies shall be required. “See Note 1, TTC-4 for additional sign information”.

17. TTC-6 (Shoulder Closure with Barrier Operation) – note 4 correction based on standard statement, shoulder taper formula and divisible by 40 feet - The minimum length for a shoulder taper “shall be 320” on Limited Access highways, and ½ L for all other roadways (see Note 7 of TTC-5 for values of L).
18. TTC-14 (Moving/Mobile Operation on a Two-Lane Roadway) – note 12 clarification, an arrow board would display the caution mode, not an arrow … *When using a CMS to replace the static sign and arrow board, each word message phase should be followed by the Type B arrow board’s caution mode.*

19. TTC-22 (Right Lane Closure Operation on a Three-Lane Roadway) – a problem was encountered in the field and we recommend adding four (4) channelizing devices to extend the lane closure for the south direction as shown in the TTC-42 or the 2012 Pocket Guide “Lane Shift on a Three-lane, Two-way Road” page 45.

20. When closing a ramp on the right side of traffic as shown in Figures TTC-46, TTC-47 and TIMC-7, the Type 3 Barricade’s stripes should be sloping downward to the left.

21. TTC-48, Road Closure Operation with a Detour:
   - Where barricades are placed in the roadway, the barricade stripes should direct the turning movement. The first barricade as shown in the roadway directs traffic to drive to the left of the barricade. The second directs traffic to drive to the right of the barricade.
   - The “M4-V4L” 90° left turn arrow should be renumbered to “M4-V3L”.
   - The M4-V5a plaque should be “WEST” instead of “NORTH”.

22. TIMC-7 (Incident Closure on a Highway) – note 6 should match TTC-45’s note 6 “*When detour signing has been installed along the detour route (see Figures TTC-46 or TTC-47), a DETOUR with directional arrow or Detour with a Route Assembly sign should be placed halfway up the ramp or loop. Additionally, a third message should be added to the one mile Portable Changeable Message Sign advising “DETOUR AHEAD.”*
